

CODELCO ANDINA WATER FACILITIES

PLANT TYPE
Wastewater treatment and water treatment plants

CLIENT
CODELCO

SECTOR
Industrial

COUNTRY
Chile

CAPACITY
Wastewater 7,200 m³/month
Drinking water 20,000 m³/month
Transport 1,700 m³/month

YEAR COMMISSIONED
2016

TYPE OF PROJECT
Services

STATUS
In operation

Codelco Andina Division is the Chilean state-owned copper mining company closest to the country's center in the middle of the Andes Mountains. Given the particular geography, the site's infrastructure is fragmented from the mountain range to the central valley where the tailings dam is located in the Huechún area. This infrastructure dispersion means Almar Water Services Latam operates and maintains 19 sewage and water treatment plants. The service also includes the transport and supply of potable water to facilities that do not have piped drinking water supply, maintenance of sewage systems, collection and cleaning of chemical toilets, cleaning of pits and grease traps, and minor repair work.
